

EVISCERATION CONVEYOR EV20

Evisceration conveyor is designed for manual evisceration operation. It is equipped with hand-washing stations and with integrated piping. The harvested giblets are conveyed to the desired location via the use of troughs. Use of correct belt type and scrapers at the end ensures the remaining package is unloaded properly.

Features:

- Equipped with hand-washing stations
- Ergonomic design for giblet harvesting personnel
- Easy to clean
