

Fresh and packed product logistics within a plant need to be designed in such a way that they not only ensure effectiveness and productivity, but also meet the most strict hygienic standards. For that reason Kromeka is not "just another vendor", but a business partner who can help you to design the optimal product flow, by utilizing the best available practices in the industry.

The conveyor designs are made according to the most up-to-date hygienic design principles. By working with the best belt suppliers in the world, the chosen belt types and stress calculations are approved by industry specialists before being released for production. The belt types that can be applied vary according to the application and include plastic modular belts, friction top systems, belt systems with flights, tensionless belt systems, PVC belts.

#### Features:

- Hygienic design for easy cleaning and minimum product residue accumulation
- Modular design that allows easy revisions in the future
- Completely AISI 304/316 execution
- CIP cleaning systems (Optional)
- Product traffic control via use of product sensors and acceleration conveyors
