

Whole birds in a poultry processing plants are mostly conveyed via the use of overhead conveyors, which allow fast transfer of products and easy processing throughout the line. Typical processing plants incorporate many kilometers of overhead conveyor lines, so smart design of bird routing and trouble-free operation of the lines is very important.

Kromeka only uses high quality and food approved materials in shackles, trolleys and overhead tracks. The conveyors can be designed to meet various speed demands for different capacities, ranging from 1,000 bph to 13,500 bph.

Features:

- T-track or sigma-track options
- Various synthetic and stainless steel shackle options suitable for different departments
- Click-type or bolted-type trolley options
- 6", 8", 10" and 12" trolley pitch options
- Reliable and speed adjustable line drives
- Line tensioning systems that minimize line wear and seamless operation
- Special line lubrication systems for long lines
